

Village Traffic and Roads Report

Vehicle Activated Sign (VAS) Report

During June 48994 vehicles were recorded travelling at 36mph and above of which 2023 were speeding excessively 45mph and above. The number of vehicles recorded is greater than this time last year by 8.9%.

As the VAS can register vehicle when they are in the 50mph zone these values need adjusting. During the week-long monitoring session by the Black Cat device at the same location, as the vehicles pass the device, a comparison of the recordings can be made and a correction applied.

The correction factors were determined to be 5.26 for speeding vehicles and 6.05 for excessive speeders. This gives corrected recordings off: 9314 and 334 respectively.

Black Cat Traffic Monitoring Device

During the period three week long Black Cat traffic monitoring sessions have taken place, one at Two Hoots (adjacent to the VAS), one at Brickfields at the Main Street entrance of the footpath between School Lane and Main Street, and one opposite the Old Post Office.

The site at Brickfields is new and is situated in the middle of the village now giving three points to monitor traffic flow through the village. A separate report detailing traffic movement along Main Street has been drafted. This report also details the changes in traffic volume and speed that passes the monitoring point at the Old Post Office over a period of twelve months.

At the time of writing a week-long monitoring session at the Jempson's roundabout is under way.

Speed Watch

There were one Speed Watch sessions carried out in July; operator availability is low and one operator has left the team.

Date	Time	Recordings	Excessive speed	Letters sent	Remarks
