

Village Traffic and Roads Report

Vehicle Activated Sign (VAS) Report

The VAS calibration data for August was determined by a Black Cat calibration generated last year. The calibration value for speeders at 36mph and above is 5.2 and for excessive speeders 45mph and above is 6.3.

The recordings for the 19th to the 29th August were severely impacted due to the road works at the East end of the village. Normally a 1000 plus vehicles per day would be recorded, on these days just over a 100 were recorded. In total over the effected period 1105 vehicles were recorded. The total vehicles recorded travelling at 36mph and above by the VAS was 23551 of which 968 were travelling at 45mph and above. The calibrated value shown in the above chart is based upon the total number of vehicles recorded but outside of the affected period.

It is being assumed here that the vehicles recorded during the road works were recorded whilst the vehicle was outside the 30mph zone.

Black Cat Traffic Monitoring Device

No Black Cat monitoring was carried out during the period.

Speed Watch

There was one speed watch session carried out in August and is summarised below.

Date	Time	Recordings	Excessive speed	Letters sent	Remarks
02/08/23	06:00-07:00	21	8	18	
Totals	1 hours	21	8	18	

There are currently no sessions planned for September.

The speed watch group was ten years old in August and its activities over this time is summarised in the table below. The group started out with 10 volunteers but this quickly diminished and over time reduced to two; the group currently has only three operators.

Description	Total
Number of sessions planned	330
Number of different dates sessions planned	267
Roadside sessions carried out	263
Cancelled sessions	67
Hours at the roadside	411
Operator hours at roadside	764
Number of recordings made	4978
Number of different vehicles recorded	4505
Letters sent	3731
Addition Police action taken	363
