

Village Traffic and Roads Report

Vehicle Activated Sign (VAS) Report

The VAS calibration data for September was determined by a Black Cat calibration generated last year. The calibration value for speeders at 36mph and above is 5.63 and for excessive speeders 45mph and above is 6.45.

The total number of speeding vehicles recorded was 4% higher than this time last year, for excessive speeders the recordings were down by 2.5%.

Black Cat Traffic Monitoring Device

There was one Black Cat monitoring session carried out in September at the Old Post Office but the battery failed after only four and a half days. The analysis program is set up for a seven-day monitoring period; the only meaningful data was the 85 percentiles of speed. Towards Rye the 85 percentiles was 34.62mph and towards Beckley was 35.67 mph.

Speed Watch

There were no speed watch sessions carried out in September due to lack of availability. There are currently no sessions planned for October.
