

Village Traffic and Roads Report

Vehicle Activated Sign (VAS) Report

The VAS recorded 33074 speeding vehicles in March of which 2055 were speeding excessively. VAS calibration values that were determined for March last year were used this year; the values being 5.55 for speeding vehicles and 6.26 for excessive speeding, resulting in 5959 speeding of which 328 were excessive.

There was a increase in recorded speeding vehicles of some 15% and excessive speeder by 9%. This is the first month where speeding has increased based on the same month in the previous year since October 2023.

Black Cat Traffic Monitoring Device

There were no Black Cat Monitoring sessions during the period.

Speed Watch

There were two speed watch sessions this month, the results of which are detailed below.

Date	Time	Recordings	Letters	Excessive speed	Remarks
21/03/25	10:00 – 11:00	20	17	0	
26/03/25	08:00 – 09:00	36	32	0	
Totals	2 sessions	56	49	0	

Since the start of the year the recording threshold for speeding traffic has been reduced. This has resulted in a 54% and 50% respectively in the number of recordings that would have been made previously.

The threshold used by the VAS cannot be adjusted so the values recorded there are based upon the old threshold value.
