

Village Traffic and Roads Report

Vehicle Activated Sign (VAS) Report

The VAS recorded 30707 speeding vehicles in October of which 2025 were speeding excessively. VAS calibration values that were determined for September 2022 were used this year; the values being 5.08 for speeding vehicles and 6.35 for excessive speeding, resulting in 6044 speeding of which 318 were excessive.

The VAS calibration values for October 2022 were used in preference to those measured in 2024 because the 2024 values were very high compared to all other calibration values calculated over the two periods for all months.

Black Cat Traffic Monitoring Device

There were no Black Cat monitoring sessions during the period.

Speed Watch

There were no speed watch sessions this month.
